

COMPANY PORTFOLIO

Water-based technology for flat glass.

CHROMACOAT

In-house formulation, made for your plant.

ChromaCoat Industrial Coatings was created to serve a niche that demands precision: specialized coatings for flat glass in industrial environments.

Founded by two partners with extensive experience in the field, the company combines decades of technical know-how with an agile structure able to respond to the real demands of the factory production line.

CUSTOM FORMULATION**The product adapts to your plant**

We don't work with generic products. ChromaCoat operates with its own formulation, developed in the lab and adjusted to each client's specific needs — for every painting process, every substrate and every performance requirement.

CLIENT FOCUS, ALWAYS**Present at every stage**

We understand your production process, validate the application on a pilot line and follow the product approval through to full operation — from initial specification to continuous technical support.

TECHNOLOGY

Water-based, custom color

Water-based

Paints developed for flat glass with environmentally friendly, low-VOC water-based technology.

Flexible application

Manual or automatic spray guns, curtain or roller, with excellent flow and rheology.

Non-catalyzed

Avoids later paint waste and simplifies the production process.

Durability

Excellent chemical and physical resistance, with high solids content by volume.

Custom colors

Solid, translucent, metallic, pearlescent and acid-etched effects — RAL, Pantone or SW catalogs.

Adaptable drying

The material adapts to forced or ambient drying, depending on the production line.

High adhesion

No adhesion primers needed. Meets NBR 11003 and ASTM D3359 standards.

Compatibility

Thermal and structural compatibility, with excellent shelf life.

FINISHES

One paint, a universe of finishes

SOLID

Solid Colors

Faithful reproduction of RAL, Pantone or SW standards, with excellent opacity and coverage.

TRANSLUCENT

Translucent

Colored transparency effect that enhances natural light in interior spaces.

METALLIC

Metallic & Pearlescent

Metallic or pearlescent finishes for projects with a high aesthetic standard.

ACID-ETCHED

Acid-Etched Effect

Matte texture that mimics sandblasted glass, without the cost and wear of sandblasting.

APPLICATIONS

Where our finishes work

Interior decoration

Decorative panels and compositions in colored glass.

Stained glass

Artistic and decorative compositions for residential and commercial stained glass.

Furniture

Doors, tops and cabinet fronts finished in lacquered glass.

Wet areas

Hydrophobic barrier against moisture and condensation, ideal for bathrooms and technical areas.

Partitions

Commercial and corporate space partitions in painted glass.

Laminated glass

Even as an organic paint, it can be laminated between glass sheets with no loss of aesthetic quality.

TAILORED TECHNICAL STRUCTURE

From diagnosis to approval.

01

Diagnosis

Of your process and substrate.

02

Formulation

Custom development.

03

Pilot test

In-line validation.

04

Approval

Through full operation.

05

Support

Technical and continuous.
